1. Backend Developer (Django + PostgreSQL)

- Set up the Django project and database (PostgreSQL).
- Develop API endpoints using Django REST Framework.
- Implement authentication (JWT) for shelters.
- Define and manage models: Dog, Shelter, Contact Form Inquiry.
- Automate processes like profile expiry notifications and adoption status updates.
- Handle deployment of the backend on AWS/DigitalOcean.

2. Frontend Developer (Next.js + UI)

- Set up the Next.js project and routing.
- Design and implement UI components (Tailwind CSS/ShadCN).
- Develop key pages: Home, Search, Dog Profile, and Shelter Dashboard.
- Integrate API calls to fetch data from the backend.
- Ensure responsiveness and accessibility for different devices.
- Handle hosting on Vercel.

3. DevOps & Full-Stack Support

- Set up and maintain CI/CD pipelines for automatic deployment.
- Configure Docker (optional) for consistency.
- Monitor and optimize performance (database queries, API calls).
- Ensure security measures like encryption and authentication.
- Assist both backend and frontend teams as needed.
- Manage multilingual support implementation and automation.
